

PHILIPS TECHNICAL REVIEW

VOLUME 22
1960/61

P H I L I P S T E C H N I C A L R E V I E W

A publication of the Research Laboratories of N.V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Twelve issues per year and an average of 32 pages per issue. The Review is published in four editions: English, Dutch, French and German, all identical in contents.

Editors

S. Gradstein, Editor-in-chief
D. M. Duinker, Deputy editor
M. Beun
D. van Dalen
E. Fischmann
K. R. Fröhner (German edition)
C. M. Hargreaves (English edition)
J. W. Miltenburg

All rights reserved by N.V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Articles may be reproduced in whole or in part, provided that the editors are first notified and that the source "Philips Technical Review" is mentioned in full. Photographs and drawings for this purpose are available on request.

SUBJECT INDEX, VOLUME 22

	Page		Page
Absorption wedges, circular optical	402	Ion-pump, getter —	260
Aerial, see Antenna		Isolators, resonance — for 8 and 4 mm waves	11
Amplifiers, difference—, general considerations	345	Lattice imperfections:	
Analysis of gases, omegatron for quantitative	195	chemical — and dielectric losses	274
Antenna, radar —, for high-speed scanning	29	— in metals, semiconductors and	
Atmosphere, exploration with radio waves	61	ionic crystals	362
Automatic control in glass manufacture	311		190
Bearing, magnetic journal	232	Low temperatures, solid-state research at	226
Bulb-blowing machines	320		268
Cadmium-sulphide crystals, etch pits on	266	Luminescence, <i>P-N</i> , in GaP	360
CERN synchrocyclotron (600 MeV)	141	Magnetic journal bearing	232
Claw flanges for waveguide joints	117	Magnetic wheel store for recording TV signals	1
Coiling machine, visual inspection of moving		Magnetron in microwave cooker	89
filaments on	239	Microphony in electron tubes	71
Cooker, microwave	89	Microwaves:	
Crystal detector for 2 mm waves	182	cooker using —	89
Crystal structures, X-ray determination of	126	noise generator for mm waves	391
C.u.a.f. in resonance isolators	11	resonance isolators for 8 and 4 mm waves	11
Cyclotron CERN, synchro- (600 MeV)	141	triodes for —, applications	16
Dielectric losses and chemical lattice imper-		waveguide equipment and measuring	
fections	274	set-ups (e.g. for gas spectroscopy) for	113
Difference amplifiers, general considerations	345	2 mm waves	181
Directional isolators, for 8 and 4 mm waves	11	Noise generator for mm waves	391
Discharge tubes, electronic-flash	377	Omegatron for quantitative gas analysis	195
Electrolytic tank	245	Optical absorption wedges, circular	402
Electron conduction in metals and semicon-		Paramagnetism in solids at low temperatures	270
ductors at low temperatures	226	Photoconductive cells using InSb (Mullard	
Electron trajectories, automatic plotting	245	ORP 10 and ORP 13)	217
Electron tubes:		<i>P-N</i> luminescence in GaP	360
microphony	71	Pol, Balthasar van der, scientific work of	36
microwave triodes, applications	16	Radar antenna for high-speed scanning	29
Electronic-flash lamps	377	Radio-wave exploration of atmosphere	61
Etch pits on CdS crystals	266	Resonance isolators for 8 and 4 mm waves	11
Ferroxplana, crystal structure	135		190
Filaments, visual inspection of moving	239	Solid-state research at low temperatures	226
Flash tubes	377		268
Frequency modulation:		Statistics, applied	105
reception with strong interference	352	Synchrocyclotron CERN (600 MeV)	141
simulation of multipath effects	393	Television, inspection of moving objects by	239
Gallium phosphide, <i>P-N</i> luminescence in	360	Television-signal recording on magnetic wheel	1
Gas analysis, omegatron for quantitative	195	Thermal conduction in insulators at low tem-	
Gas spectroscopy, microwave	187	peratures	268
Getter ion-pump	260	Transistors, methods of producing stable	204
Glass:		Triodes for microwaves, applications	16
automatic control in — manufacture	311	Tuning-fork modulator for CERN synchro-	
demountable seals for — high-vacuum		cyclotron	162
equipment	53	Vacuum technique:	
glass-to-metal seals, testing of materials	337	demountable glass seals	53
history of applications	282	getter ion-pump	260
mechanical production of bulbs	320	glass-to-metal seals, testing of materials	337
structure (e.g. invert glasses)	300	omegatron for quantitative gas analysis	195
Indium antimonide, properties and application			113
for photoconductive cells	217	Waveguide equipment for 2 mm microwaves	181
Insulators, thermal conduction at low tem-		X-ray diffraction for determination of crystal	
peratures	268	structures	126
Invert glasses	302	X-ray images, recording on magnetic wheel	1

AUTHOR INDEX, VOLUME 22

Articles marked with an asterisk * are short communications.

	Page		Page
Amstel, J. J. A. Ploos van, see Ploos van Amstel		Koelmans, H. and H. G. Grimmeiss	
Backers, F. T.		* P-N luminescence in gallium phosphide	360
A magnetic journal bearing	232	Kortleven, S. and K. H. Schmitter	
Bartlett, B. E. and R. E. J. King		The CERN 600 MeV synchrocyclotron at Geneva,	
Properties and applications of indium antimonide . .	217	II. The radio-frequency system	149
Beljers, H. G.		Koster, J.	
Resonance isolators for millimetre waves	11	Multipath transmission effects in FM reception and	
Bollée, B. and F. Krienen		their simulation in the laboratory	393
The CERN 600 MeV synchrocyclotron at Geneva,		Krienen, F. and B. Bollée	
III. The tuning-fork modulator	162	The CERN 600 MeV synchrocyclotron at Geneva,	
Bommel, A. J. van and P. B. Braun		III. The tuning-fork modulator	162
X-ray determination of crystal structures	126	Meerburg, E. G., S. S. Dagpunar and A. Stecker	
Braun, P. B. and A. J. van Bommel		Microphony in electron tubes	71
X-ray determination of crystal structures	126	Meyer, C.	
Bremmer, H.		Recent developments in electronic-flash lamps . .	377
The scientific work of Balthasar van der Pol	36	Plantinga, G. H. and P. A. H. Hart	
Exploring the atmosphere with radio waves	61	* An experimental noise generator for millimetre waves	391
Bueren, H. G. van		Ploos van Amstel, J. J. A.	
Lattice imperfections in metals, semiconductors and		Methods of producing stable transistors	204
ionic crystals	362	Ronde, F. C. de, C. W. van Es and M. Gevers	
Cupido, P. M.		Waveguide equipment for 2 mm microwaves,	
Automatic control in glass manufacture	311	I. Components	113
Dagpunar, S. S., E. G. Meerburg and A. Stecker		II. Measuring set-ups	181
Microphony in electron tubes	71	Schmidt, W.	
Einramhof, F.		The heating of food in a microwave cooker	89
Visual inspection of moving lamp filaments on a coiling		Schmidt, W. and A. Klopfer	
machine	239	An omegatron for the quantitative analysis of gases	195
Eland, A. J.		Schmitter, K. H. and S. Kortleven	
* Etch pits on cadmium-sulphide crystals	266	The CERN 600 MeV synchrocyclotron at Geneva,	
Ermrich, W. and A. Klopfer		II. The radio-frequency system	149
A small getter ion-pump	260	Seitz, G. and B. Jonas	
Es, C. W. van, M. Gevers and F. C. de Ronde		Demountable seals for glass high-vacuum equipment	53
Waveguide equipment for 2 mm microwaves,		Slooten, J. van	
I. Components	113	FM reception under conditions of strong interference	352
II. Measuring set-ups	181	Stecker, A., S. S. Dagpunar and E. G. Meerburg	
Forbes, R. J.		Microphony in electron tubes	71
Glass throughout the Ages	282	Stevels, J. M.	
Gentner, W.		New light on the structure of glass	300
The CERN 600 MeV synchrocyclotron at Geneva,		Valster, F.	
I. Object and design	142	A high-speed scanning radar antenna	29
Gevers, M., C. W. van Es and F. C. de Ronde		Verster, J. L.	
Waveguide equipment for 2 mm microwaves,		An apparatus for automatically plotting electron	
I. Components	113	trajectories	245
II. Measuring set-ups	181	Volger, J.	
Gieles, J. P. M.		Solid-state research at low temperatures,	
Applications of microwave triodes	16	I. Introduction	190
Grimmeiss, H. G. and H. Koelmans		II. Electron conduction in metals and semiconductors	226
* P-N luminescence in gallium phosphide	360	III. Thermal conduction in insulators; paramagnet-	
Hamaker, H. C.		ism; dielectric losses related to chemical lattice	
Applied statistics, an important phase in the develop-		imperfections	268
ment of experimental science	105	Vries, J. de	
Hart, P. A. H. and G. H. Plantinga		Testing of materials for glass-to-metal seals by means	
* An experimental noise generator for millimetre waves	391	of stress birefringence	337
Jonas, B. and G. Seitz		Wal, J. van der	
Demountable seals for glass high-vacuum equipment	53	* Circular optical absorption wedges	402
King, R. E. J. and B. E. Bartlett		Wessels, J. H.	
Properties and applications of indium antimonide	217	A magnetic wheel store for recording television signals	1
Klein, G. and J. J. Zaalberg van Zelst		Zaalberg van Zelst, J. J. and G. Klein	
General considerations on difference amplifiers . . .	345	General considerations on difference amplifiers . . .	345
Klopfer, A. and W. Ermrich		Zonneveld, P. van	
A small getter ion-pump	260	Mechanical production of bulbs for electric lamps and	
— and W. Schmidt		radio valves	320
An omegatron for the quantitative analysis of gases	195
